# Hamilton's Depository Access Control System (DACS)

with Windows NT<sup>®</sup> operating system and Touchscreen display

*DACS – the "midnight auditor" which takes commercial deposits and foils attempts at fraud – now features the highest level of security with an easy-to-use format, including:*

- Identifying the access card used to make a deposit.
- Photographing the person making the deposit and the deposit bag as it enters securely into the depository.
- Recording the time of the deposit and the deposit slip, and giving a receipt for the transaction.
- Easy-to-read instructions to illustrate the full transaction and procedures to customers.
- Advertising Screen Management interface to easily configure marketing and other messages during machine idle.
- Integrated access control door control system enhances the safety of depositors by preventing unauthorized access. The integrated access door control system is maintained in a single intelligent database, thus eliminates need for redundant databases.
